INTRODUCTION TO THE PHILOSOPHY OF THE HUMAN PERSON

Methods of Philosophizing

kto12lrm

When you evaluate information, it is very important to distinguish between fact and opinion.

How do we know if something is true?

A method of philosophizing is a process of determining the truth or drawing conclusions from a statement using various philosophical methods, such as: Socratic, dialectic, scientific, and historical.

Philosophers emphasize the importance of belief as a basis for determining truth. It is said that there are instances when we have to unlearn something so that we may learn a new. Philosophers questioned what they knew and even analyzed their methods of knowing in order to understand themselves and the world much better.

The discussion on truth is part of philosophical studies on knowledge where philosophers explore the nature of knowledge and the ways of knowing

Both the Socratic and dialectic method are based on a discussion between two or more people who may carry differing views but wish to pursue the truth by seeking an agreement with one another. Meanwhile, the scientific method is a process of determining truth or knowledge through experimentation, inductive and deductive reasoning, and hypothesis or theory testing.

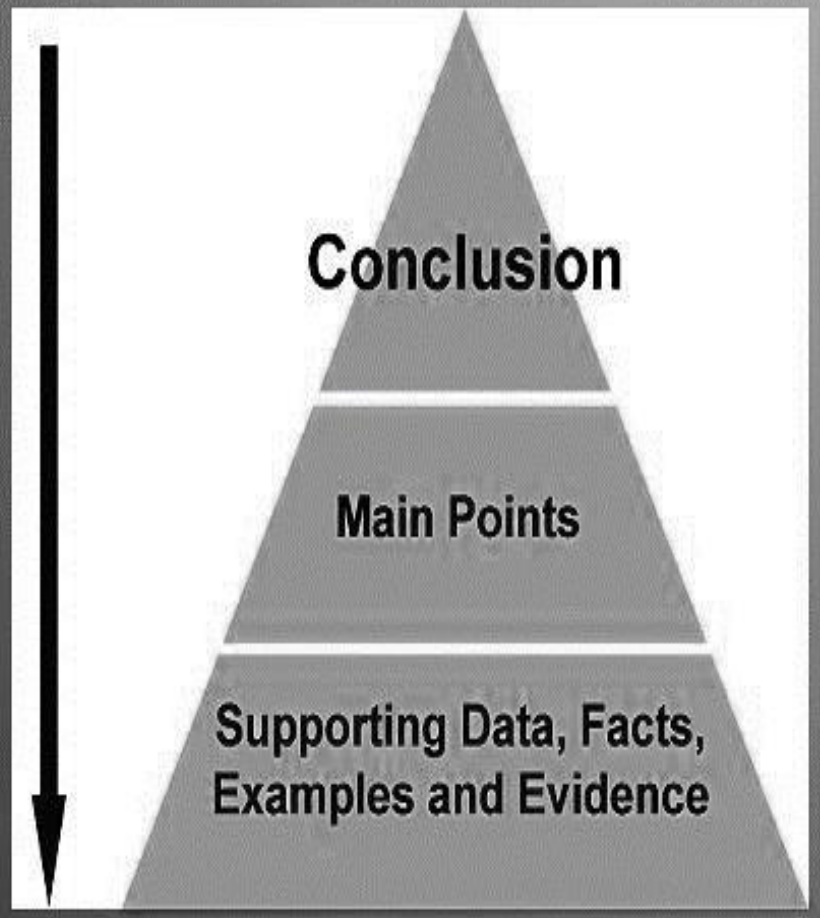
The **scientific method**, also called empirical method, is a process of determining truth or knowledge through experimentation, inductive and deductive reasoning, and hypothesis or theory testing

Logic is the truth based on reasoning and critical thinking. It includes analysis and construction of arguments. It serves as path to freedom from half-truths and deception.

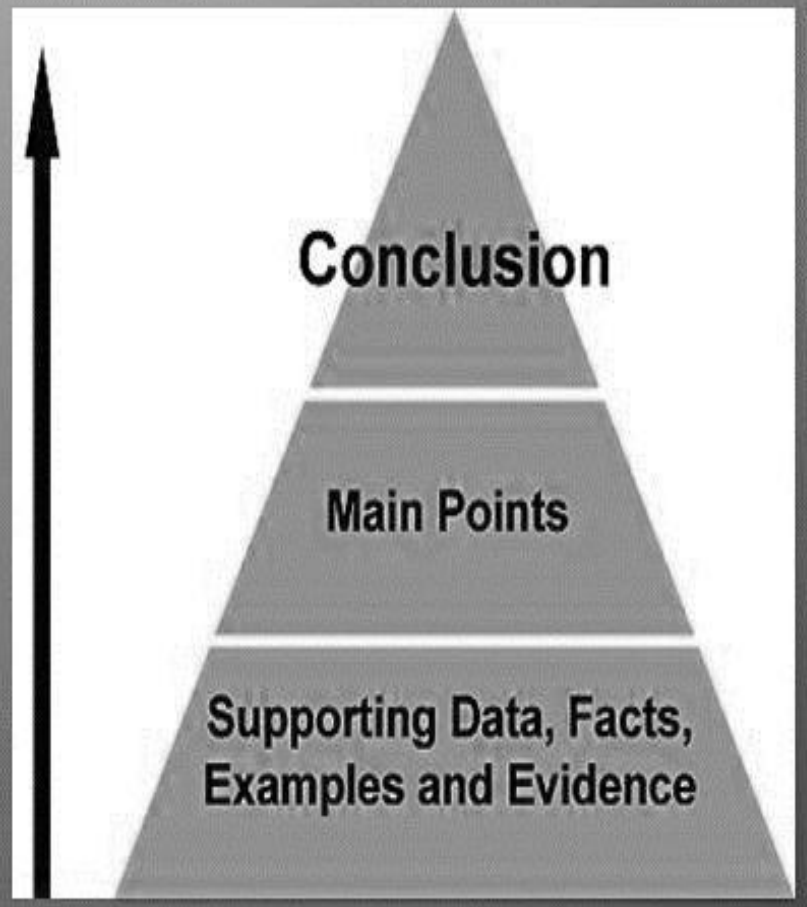
TYPES OF REASONING

- Deductive Reasoning
- Inductive Reasoning

- Top-Down Logic



- Bottom-Up Logic



DEDUCTIVE REASONING

In this type of reasoning, conclusion comes first, followed by main points, and the last will be the supporting data, facts, examples, and evidences. General idea comes first before the specific or particular idea.

INDUCTIVE REASONING

In this type of reasoning, supporting data, facts, examples, and evidences come first followed by the main points and conclusion will be the last part. This is the vice versa of the deductive reasoning because particular idea comes first before the general idea.

Direction: Read the conversation below and answer the following question. Write your answer in a 1 whole yellow pad.

Lover's Quarrel

Shanon: Did you hear about what happened between Angel and her boyfriend?

Vanvan: What happened?

Shanon: They got a huge fight last night. Angel called me up. She was crying and she said that Mike hit her.

Dean: Wait, what? That's not right? Mike came by my place last night and he was pretty shaken up. He had scratch marks on his arms and a bite on his left hand. He said Angel just attacked her and was accusing him of seeing another girl.

Shanon: No! Angel said it was Mike who started to hit her and she had to defend herself!

Direction: What can you say about the quotation below? Do you agree with this? Express your answers.

FALSE AS FALSE

"See the false. The true as true. Look into your heart. Follow your nature. "

- Budda

The different ways of philosophizing could lead us to the path of **wisdom and truth.** **Firstly,** the methods of philosophizing can help man to think reflectively, critically, and philosophically. Through the use of logic, man has learned to use reasoning and critical thinking in discerning truthful statements. **Secondly,** Philosophy can help us examine various views on relevant issues in our lives. An objective evaluation of opinions and an awareness of our own biases can help us make wise choices regarding the most acceptable views to adopt and the right actions to undertake.

Direction. Select one issue from the current issues in our society today. How do you apply methods of philosophizing in determining the truth. Write your answer on the space

provided.
